Repeat, Homopolymer & GC Content — Paired Analysis

Frameshift vs FS Control (n=94 pairs) · Stopgain vs Stopgain Control (n=64 pairs) · Paired Wilcoxon signed-rank, BH-adjusted within metric

A

CDS Repeat Fraction

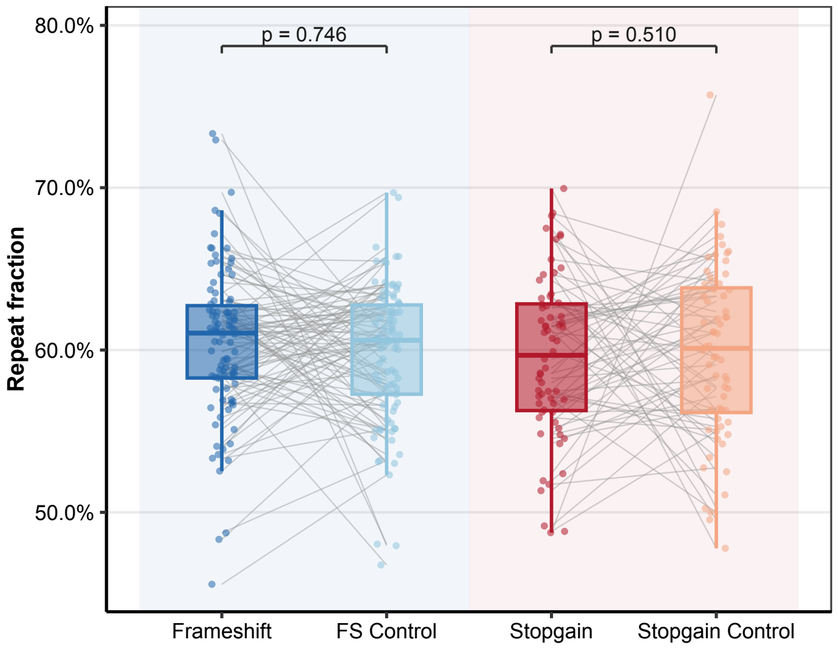

Fraction of full CDS in repeat elements

B

NMD-Escape Repeat Fraction

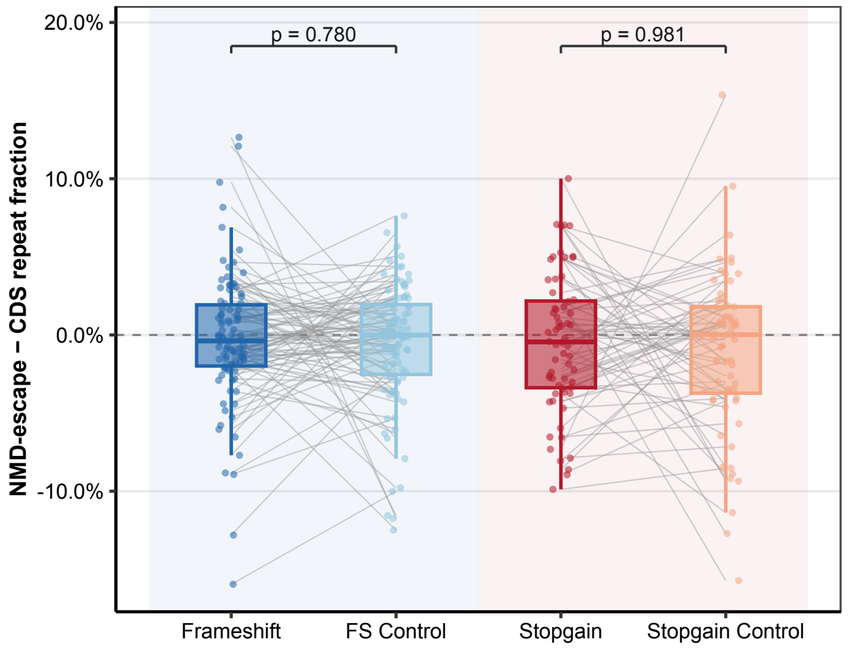

Fraction of NMD-escape region in repeat elements

C

Repeat Δ (NMD-Escape − CDS)

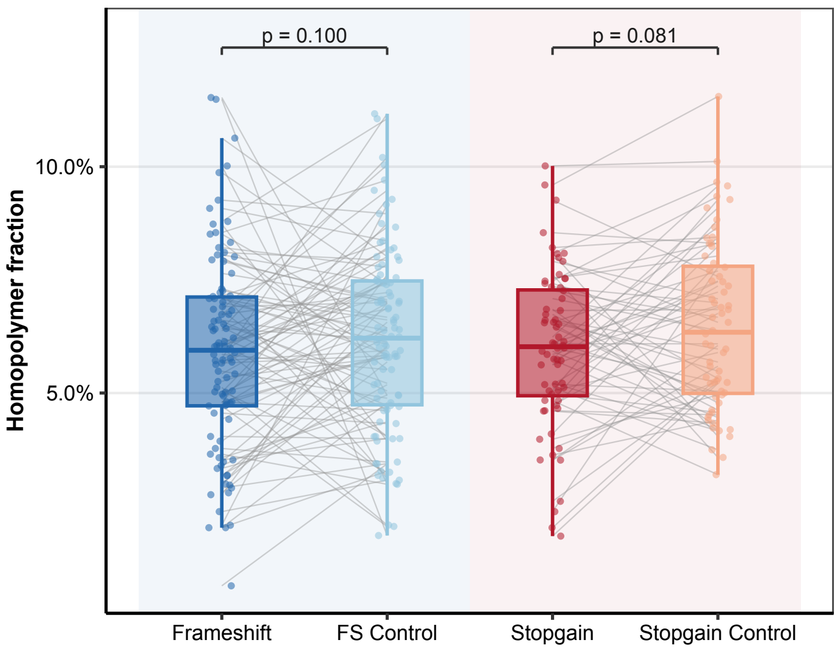

Positive = NMD-escape region repeat-richer than full CDS

D

CDS Homopolymer Fraction

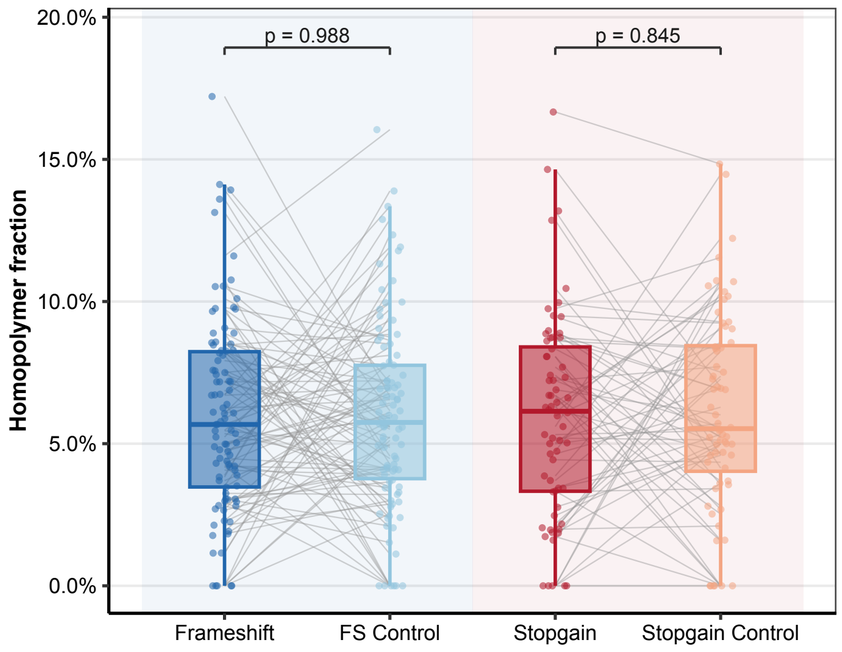

Fraction of full CDS in homopolymer runs

E

NMD-Escape Homopolymer Fraction

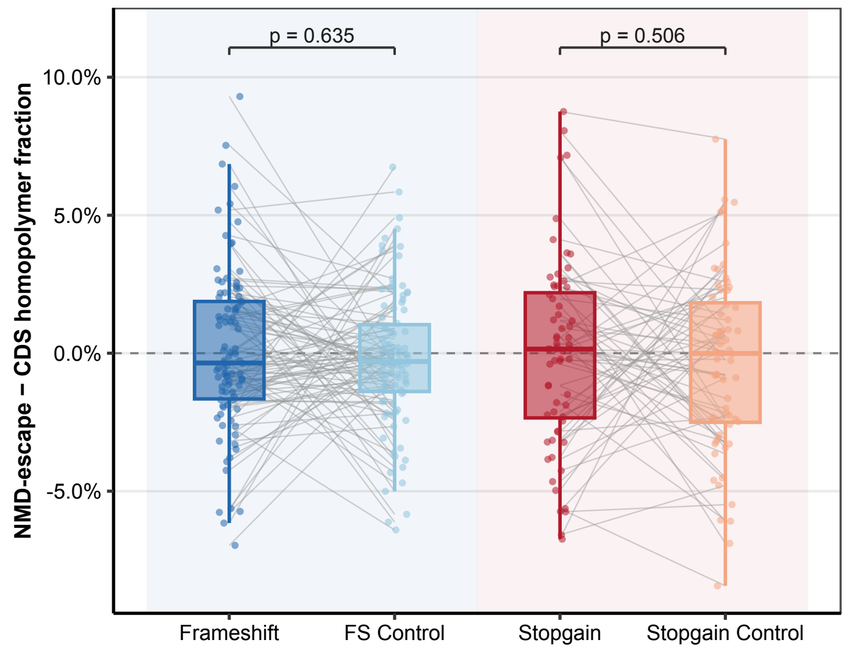

Fraction of NMD-escape region in homopolymer runs

F

Homopolymer Δ (NMD-Escape − CDS)

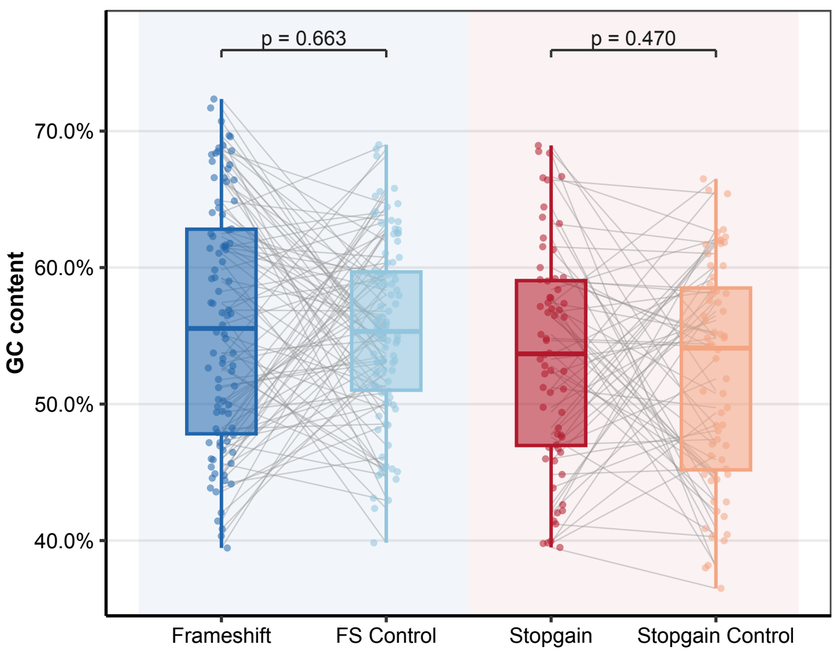

Positive = NMD-escape homopolymer-richer than full CDS

G

CDS GC Content

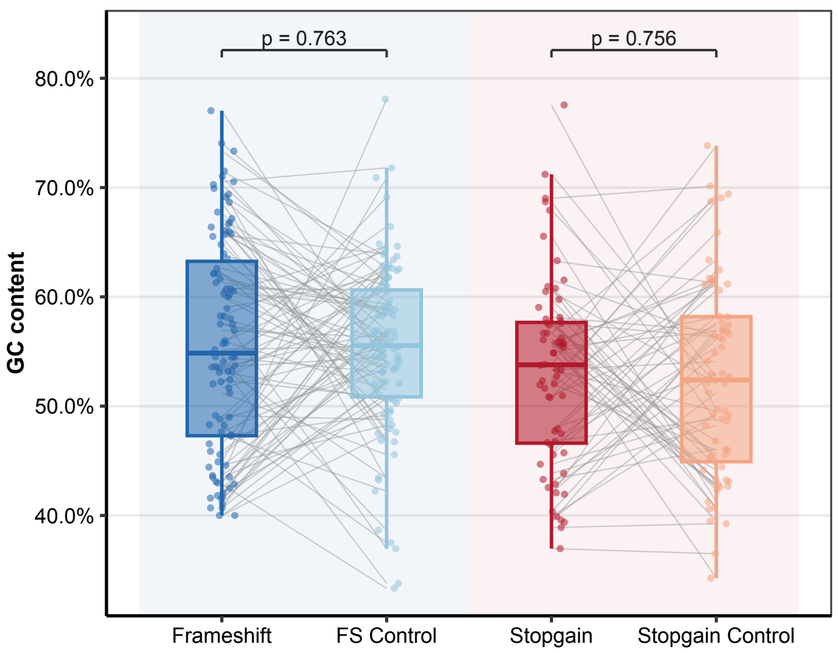

Fraction of full CDS that is G or C

H

NMD-Escape GC Content

Fraction of NMD-escape region that is G or C

I

GC Δ (NMD-Escape − CDS)

Positive = NMD-escape region GC-richer than full CDS
