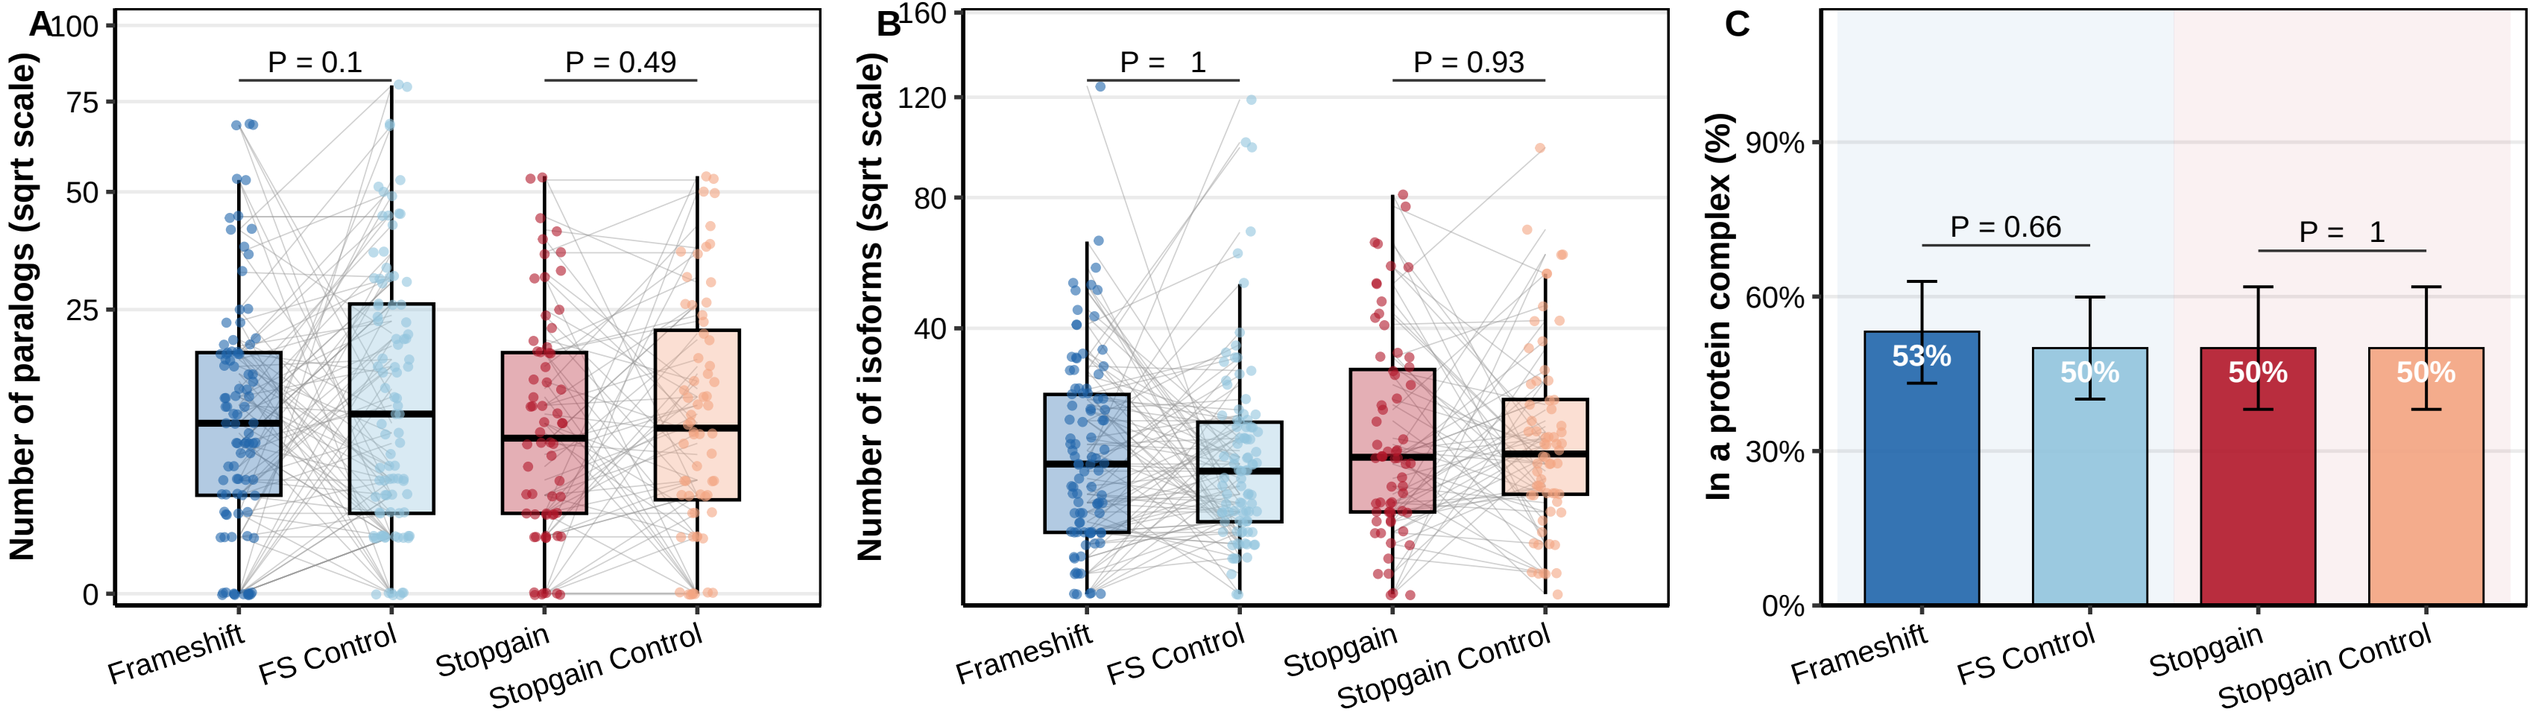
Figure S3 − Paralog, isoform and protein−complex counts of NMD−escape disease genes and their length−matched controls

Top 20% rare design (94 frameshift / 64 stopgain) − 1:1 matched − paralog 93/64 pairs, isoform 94/64 pairs, complex 94/64 each



A, B: paired Wilcoxon signed−rank, unadjusted P shown, sqrt y−axis. C: Wilcoxon rank−sum (unpaired) on binary CORUM membership, Wilson 95% CI. BH−adjusted P in the three *_comparison_stats.csv files.
